

AGRICO – Digital Farming Companion

Digital Farming. Smarter Future.

Project Documentation

Prepared as a project reference, presentation document, and portfolio documentation.

1. Project Overview

AGRICO is a digital farming platform designed to bring important farming needs together in one simple and accessible website. It connects farmers with farm equipment, farm services, a crop marketplace, and smart farming information.

2. Problem Statement

- Farm equipment such as tractors and harvesting machines can be expensive or difficult to access when needed.
- Farmers may face difficulty finding available farm workers and services at the right time.
- Farmers can depend on intermediaries when selling crops and may have limited direct access to buyers.
- Excessive or inappropriate use of chemical fertilizers can affect long-term soil quality.
- Useful information about crops, weather, soil, and farming decisions is often scattered across different sources.

3. Proposed Solution

AGRICO provides a single digital platform where farmers can explore equipment and services, submit crops for marketplace listing, manage their account, and access smart farming information. The platform is designed around practical farming activities rather than treating each need as a separate service.

4. Project Objectives

- Create one digital platform for common farming needs.
- Improve access to farm equipment and services.
- Give farmers a direct digital route to list crops.

- Provide a simple marketplace experience.
- Support better farming decisions through organized digital information.
- Provide a user account system for farmers.

5. Main Modules

Module	Description
Farm Equipment	Allows users to explore equipment such as tractors and other farm machinery available through the platform.
Farm Services	Provides a place to discover farming-related services such as harvesting support.
Crop Marketplace	Displays crop listings and allows farmer-submitted crops to become marketplace products.
Smart Farming	Presents farming-related information and digital guidance around crop, weather, and soil decisions.
Farmer Account	Provides registration, login, dashboard, crop submission, order history, account details, and logout.
Contact & Support	Provides a contact page through which visitors can communicate with the AGRICO team.

6. Website Pages

Page	Purpose
AGRICO Home	Main landing page introducing the platform, its services, workflow, smart farming section, and calls to action.
Marketplace	Central product marketplace containing farm equipment, services, and crop listings.
About AGRICO	Explains the mission, offerings, benefits, and purpose of the platform.
Smart Farming	Provides the platform's smart farming information section.
Sell Your Crop	Form through which registered farmers submit crop details.
Register	New users create their AGRICO account.
Login	Existing users access their account.
Contact	Contact and enquiry page for visitors.

7. Farmer User Flow

1. Visitor opens AGRICO Home.
2. Visitor explores equipment, services, marketplace, and smart farming sections.
3. A farmer registers for an account.
4. The farmer logs in and reaches the Farmer Dashboard.

5. The farmer selects “Sell Your Crop” and submits crop information.
6. The submitted crop is converted into a WooCommerce product and made visible in the Crop Marketplace.
7. Users can browse products and use WooCommerce shopping functionality.
8. The farmer can manage orders and account information from the dashboard.

8. Technology Stack

Technology	Purpose
WordPress	Website content management and platform foundation
Elementor	Page design and responsive page layouts
WooCommerce	Products, marketplace functionality, cart and orders
Forminator	Registration and crop submission forms
PHP	Custom WordPress/WooCommerce automation and dashboard customization
HTML/CSS	Structure and visual styling
ACF	Custom content/data support where required

9. Key Functional Features

- Responsive AGRICO website interface.
- Custom AGRICO header, navigation, branding, and footer.
- Farmer registration and login.
- WooCommerce-based Farmer Dashboard.
- Custom “Sell Your Crop” dashboard option.
- Crop submission form with crop, category, quantity, unit, price, location, description, and image fields.
- Automatic creation of a WooCommerce crop product from a valid crop submission.
- Immediate marketplace visibility for submitted crops.
- Product categories for marketplace organization.
- WooCommerce cart and order functionality.
- Contact and support form.
- AGRICO-focused visual design using green and cream branding.

10. Crop Listing Automation

The crop-selling workflow is designed to minimize manual administration. When a farmer submits the Sell Your Crop form, the custom PHP integration reads the submitted crop information and creates a WooCommerce simple product. The product is published with its price and available quantity and is assigned to the Crop Marketplace category. This removes the manual review/approval step from the intended AGRICO workflow.

11. Design System

Design Element	Specification
Primary Green	#1B5E3C

Cream Background	#F7F5ED
Dark Text	#17231B
Muted Text	#4B554E
Border	#E5E8E3
Headings	Poppins-style bold headings
Body	Inter-style clean body text
Cards	Rounded corners, approximately 16px
Buttons	Green primary buttons with compact rounded corners

12. Testing Checklist

- ☐ Home page opens correctly.
- ☐ Header navigation links open the intended pages.
- ☐ Get Started opens the Register page.
- ☐ Registration creates a new user account.
- ☐ Registration redirects the user to AGRICO Home.
- ☐ Sell Your Crop is visible in the dashboard.
- ☐ Crop submission is accepted.
- ☐ Submitted crop is created as a marketplace product.
- ☐ Submitted crop is visible in the Marketplace.
- ☐ Add to Cart works for marketplace products.
- ☐ Orders are recorded correctly.
- ☐ Account Details can be accessed.
- ☐ Logout works.
- ☐ Contact form submits successfully.
- ☐ Pages remain usable on mobile/tablet screen sizes.

13. Future Scope

- Location-based matching between farmers and nearby equipment/service providers.
- Farmer-to-buyer communication and verified buyer profiles.
- Crop price trends and regional market insights.
- Soil and crop recommendations based on verified agricultural data.
- Multilingual support for regional languages.
- Mobile application or progressive web app version.
- Notifications for orders, crop listings, and service availability.

14. Project Outcome

AGRICO demonstrates how a WordPress-based digital platform can combine farming services, equipment access, crop marketplace functionality, farmer accounts, and smart farming information within one consistent user experience. The project focuses on reducing fragmentation in everyday farming activities and creating a practical digital interface for farmers.

15. Conclusion

AGRICO is designed as a practical Digital Farming Companion rather than a simple informational website. Its core workflow connects farmers with marketplace services while giving them control over crop listings and account activities. The platform provides a foundation that can later be expanded with location-aware services, agricultural data, multilingual support, and mobile access.
